The eight Moon phases: New: We cannot see the Moon when it is a new moon. Waxing Crescent: We see the waxing crescent phase as a thin crescent opening to the left. First Quarter: We see the first quarter phase as a half moon. Waxing Gibbous: The waxing gibbous phase is between a half moon and full moon. Waxing means it is getting bigger.

What Are the Moon's Phases? | NASA Space Place – NASA ...
The revolution of the Moon around the Earth makes the Moon appear as if it is changing shape in the sky. From Earth we see the Moon grow from a thin crescent to a full disk (or full moon) and then shrink back to a thin crescent again before vanishing for a few days. The Moon phases are produced by the alignment of the Moon and the Sun in the sky. The lit part of the Moon always points the way to the Sun.

Phases of the moon worksheet (teacher made)
The phase of the moon is how much of the moon appears to us on Earth to be lit up by the sun. Half of the moon is always lit up by the sun, except during an eclipse, but we only see a portion that's lit up. This is the phase of the moon. Around once per month, every 29.53 days to be exact, the phases of the moon make a complete cycle.
