Auto Education Academy reveals repair procedure for common fault on models within specific VIN range. The latest GW reader challenge from Euro Academy's technical helpline concerns a Land Rover Range Rover Mk 4 models equipped with the 3.0-litre turbo diesel (155 kW / 211 HP), designation 306DT. The issue, which only affects vehicles within a specific VIN range, will trigger a fault message on the multifunction screen that reads 'Engine system fault'.

Engine System Fault. Well, most of the Range Rovers don't take in this problem. However, a few owner have reported this problem. Over 100km/h, a message starts appearing on the dashboard showing "Engine System Fault". After this pops out, the engine slows down and it takes too long to get to 120km/h. That's nasty, isn't it?

As for the engine exactly the same fault in almost exactly the same time frame. The eventual cause was diagnosed as a faulty EGR valve, which is apparently water cooled on the L322, that had been leaking - most likely since new - and at a rate that seems to takes 3 years to fill an intercooler before the coolant in the system skims though the turbo and then engine goes bang.

She'll rev through the range once or twice under load until the 'Engine System Fault' appears. Thereafter it's back to 1500rpm with the foot on the floor. Live fault codes at idle show one MAF at 178 whilst the other is at 20. Revving the car gives MAF readings of 350+ one one and about 70 on the other. Changing the MAF makes no difference.
